INTRODUCTION

In the scenario of liver resections there are limited data regarding the occurrence of AKI in the post-operative period, with an incidence ranging from 0.9% to 15.1%^[1-5], moreover, its clinical relevance (mortality, morbidity and hospital stay) were not conclusively explored and clarified. A comprehensive analysis of the scarce data ^[4] is also hampered by the lack of consensus in the exact definition of AKI after liver resection.

Candidates for liver resections often present with multiple potential risk factors regarding po

Patients eligible for partial hepatectomy often present underlying chronic liver d

How it Works

First, write out your text as usual in any word processing program that you prefer. Review it yourself first to catch any stray words or thoughts and bring them in to order.

When you're done, enter your text into the form above (bookmark this page now for later use!)

Press the  **Free Check** button. If you see an underlined **spelling error**, **style suggestion**, or **grammar suggestion** in your text, click on them to see more options. Apply corrections where you need them. Then, the system will automatically check grammar usage and spelling and give you the final verdict. Lastly, make the suggested changes to your text before you send it on its way. Make a final read-through to make sure that you've caught everything, and that you agree with the changes.

Meanwhile, the  **Deep Check** button checks your text the same way the "Free Check" button does. The difference is the Deep Check button is capable of detecting even more difficult-to-spot mistakes, such as run-on sentences or dangling modifiers, and up to ten times more mistakes than popular word processors.*
