Hepatic complications induced by immunosuppressants and biologics in inflammatory bowel disease

Tran-Minh My-Linh, Sousa Paula, Maillet Marianne, Allez Matthieu, Gornet Jean-Marc

### Abstract

The incidence of inflammatory bowel diseases (IBD) is rising worldwide. The therapeutic options for IBD are expanding, and the number of drugs with new targets will rapidly increase in coming years. A rapid step-up approach with close monitoring of intestinal inflammation is extensively used. The fear of side effects represents one the most limiting factor of their use. Despite a widespread use for years, drug induced liver injury (DILI) management remains a challenging situation
