Synthesis of evidence for the treatment of intersection syndrome

Konstantine Balakatounis, Antonios G Angoules, Nikolaos A Angoules,  
Kalomoira Panagiotopoulou

#### Abstract

Intersection syndrome is a rare sports overuse injury occurring through friction at the intersection of the first and second compartment of the forearm. Differential diagnosis must be carefully made, especially from De Quervain tendonsynovitis. Clinical examination provides with the necessary information for diagnosis, still magnetic resonance imaging scans and ultrasonography may assist in diagnosis. Treatment consists mainly of rest, use of a thumb spica splint,
