COMMENTS TO AUTHORS

This is an excellent review article discussing the immunology of Echinococcus Granulosus which mostly effects the liver, but can also infect lungs and other organs in the body such as the spleen, brain, heart, and kidneys. The article is well written except for very few spelling errors like Orgns instead of Organs. The only question is appropriateness of this article for a Hepatology journal. This article is not clinically relevant and not a topic of interests for most Hepatologists. This article suits more for an Immunology or infectious disease journal.

COMMENTS TO AUTHORS

The authors well reviewed that the understanding of the immune mechanisms to E.granulosus infection is extreme important. This information is useful for clinical management. This paper is unique, interesting and well-reviewed. It is suitable for publication in Experimental and Therapeutic Medicine.
