COMMENTS TO AUTHORS

In this article, Sicops F., et al reviewed the recent progress on the interaction between IGF/IGF1R axis and autophagy and its pathogenesis and therapeutic role in colitis and CRC. Basically, the article is well organized. But personally I think it is necessary to make the article more concisely and straight with graph and table. 1. A diagram about the composition and function of IGF/IGFR axis is suggested. 2. Please summarize the connection between IGF/IGF1R and autophagy in various clinical situations into a table or a graph. 3. A typo in page 8: "phosphorilation".
