Review of stem cells as promising therapy for perianal disease in inflammatory bowel disease

Francis E Dailey, Erica P Turse, Maliha Naseer, Jack D Bragg, Veysel Tahan

Abstract

Those patients with perianal Crohn's disease or ulcerative colitis experience a difficult to treat disease process with a delayed state and often inability to heal despite current therapies. The approaches currently used to treat these patients with corticosteroids, antibiotics, immunomodulators, anti-tumor necrosis factor (TNF- α) drugs, and surgical repair are limited in their healing ability. This review presents all current literature
