28 April 2018

Dear Editor,

Please find attached our manuscript "**Low Radiation Dose and High Image Quality Coronary CT Angiography in "Real-World" Unselected Patients**".

As the study involved no deviation from standard treatment protocols and no randomization it was not considered "research requiring ethical approval" by the NHS Research authority tool. This result is available for viewing if required.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'Dr Obaid'.
