Role of pre-transplant 18F-FDG PET/CT in predicting hepatocellular carcinoma recurrence after liver transplantation

Onur Yaprak, Sencan Acar, Gokhan Ertugrul, Murat Dayangac

Abstract

Last two decades have seen a paradigm shift in the selection of patients with hepatocellular carcinoma (HCC) for liver transplantation (LT). Microvascular invasion and differentiation have been the most significant factors affecting posttransplant recurrence, however, because of inherent disadvantages of pre-transplant biopsy, histological criteria never gained popularity. Recently, the
