### Abstract

Quality of life (QoL) is a vital and often required health outcome measure that is relevant to patient care. A healthy and functional oral cavity allows an individual to perform daily activities without any limitations. However, any disturbance may result in impaired QoL. The oral health-related quality of life (OHRQoL) is an integral aspect of general health and well-being. In recent years, the tradition of clinical practice and research has been changed by incorporating OoL assessment, as
