Endoscopic management of primary sclerosing cholangitis

Neil Bharat Marya, James H Tabibian

Abstract

Primary sclerosing cholangitis (PSC) is a rare but prominent fibroinflammatory cholangiopathy which can affect individuals of essentially any age. It carries a median survival of 15-20 years, regardless of age at diagnosis, and is a foremost risk factor for cholangiocarcinoma (CCA). Given the chronic and progressive nature of PSC, its inherent risk for biliary tract and other complications, and the paucity of effective
