**Manuscript Type:** REVIEW

**Difficult biliary cannulation: historical perspective, practical updates, and guide for the endoscopist**

Rani Berry, James Y Han, James H Tabibian

### Abstract

Despite improvements in endoscopic technologies and accessories, development of advanced endoscopy fellowship programs, and advances in ancillary imaging techniques, biliary cannulation in ERCP can still be unsuccessful in up to 20% of patients, even in referral centers. Once cannulation has been deemed to be difficult, the risk of post-ERCP pancreatitis and technical failure inherently increases. A number of factors, including endoscopist experience and patient anatomy, have been associated with difficult biliary cannulation, but predicting a case of difficult cannulation *a priori* is often not possible. Numerous techniques such as pancreatic guidewire and stenting,
