

PEER-REVIEW REPORT

Name of journal: World Journal of Diabetes

Manuscript NO: 45714

Title: Insulin resistance is associated to subclinical vascular disease in humans

Reviewer's code: 00058696

Reviewer's country: United States

Science editor: Fang-Fang Ji

Date sent for review: 2019-01-17

Date reviewed: 2019-01-24

Review time: 16 Hours, 6 Days

SPECIFIC COMMENTS TO AUTHORS

This new review article has been carefully examined. My major questions are summarized below: 1) The organization is not consistent with a review article. The logical organization for topics is: problems that have been resolved; problems that remain; and future research directions in this area of research. The present format of

this review article does not include a core tip; description of the literature search; and conclusion. 2) The English grammar is rough in areas, which can make it difficult to follow the authors' logic. The authors should consider having their manuscript reviewed by an English consultant. 3) For "functional and structural" consider using the terms "physiological and histopathological". 4) "Associated to"; are the authors referring to "related to" or "associated with"? 5) Introduction, paragraph 1: references are needed. 6) "II. Insulin resistance is independently associated"; on pages 5-7. This section can be shortened by omitting descriptions of elementary concepts of cardiovascular physiology. 7) Major concepts should be referenced as they are introduced rather than providing a brief summary of the conclusion. The authors should provide as needed brief descriptions of the weaknesses of these major references. 8) Having identical subtitles makes it difficult to follow the logical organization of this topic: i.e. page 10 "II.2 Clinical manifestations of insulin resistance" and page 16 "III.2 Clinical manifestations of insulin resistance". 9) Figure 1: This appears to summarize "A simplified proposed mechanism". 10) Figure 2: This appears to summarize "Pathophysiological vascular changes". 11) It is not clear how the authors have incorporated Table 1, Table 2, and Table 3 into this review article. Minor Issues: 1) It should be "hypertriglyceridemia".
