#### **Reviewer no. 02731847**

This review tries to make a comprehensive approach to a very rare entity, namely the malignant hepatic vascular tumors, gathering the newest information in the literature, in order to help clinicians to deal with these cases. No special suggestions were made by this reviewer.

#### **Reviewer no. 03769383**

Changes performed following the reviewer`s suggestions:

1. We have inserted a table containing main clinical-pathological aspects of malignant vascular hepatic tumors in adults, including all the information required.  
Also, figures showing representative pathological features of the tumors were added
2. We standardized the style of the manuscript and the subtitles for each disease
3. Moreover, we standardized the format of the references
4. We have included the two recent articles that were suggested by the reviewer, both by completing the information in the text of the paper, and as citations
5. We performed a work of improving the quality of this manuscript by refining the format of the content.

We want to highlight the fact that our manuscript was submitted for professional English editing and that we received a language certificate which attests the quality of the paper.

#### **Reviewer no. 02509032**

The aim of this review was to be useful for clinical practice, in improving general understanding about this rare topic. Also, this reviewer makes no recommendation for the authors.

**Editors of the journal**

As you recommended, we merged the figures having similar content and we changed the legend accordingly. Also, the new numbers of the figures were introduced in the text. All the new changes were marked with red color in the text.
