## Cataracts diabetes mellitus

Cataract is considered a **major cause of visual impairment in diabetic patients** as the incidence and progression of cataract is elevated in patients with diabetes mellitus [5, 6]. The association between diabetes and cataract formation has been shown in clinical epidemiological and basic research studies.

### Cataract in diabetes mellitus

Hasan Kiziltoprak, Kemal Tekin, Merve Inanc, Yasin Sakir Goker

#### Abstract

Diabetes mellitus (DM) is a chronic systemic disease that has increases in prevalence over time. DM can affect all ocular structures, with cataract being the most common ocular complication. Cataract is the leading cause of blindness worldwide. Due to several mechanisms, there is an increased incidence of cataract formation in the diabetic population. Advancements in technology have now made cataract surgery a

## Cataracts

Blurred vision due to clouding of the lens

A condition affecting the eye that causes clouding of the lens.

- Very common (More than 3 million cases per year in US)
- Diagnosis often requires lab test or imaging
- Treatment from medical professional advised
- Can last several months or years

Cataract develops when proteins in the eye form clumps, preventing normal movement of light through the eye, to the retina. The lens becomes cloudy, and objects appear blurry, hazy, or faded in color. The
