Moving forward on the pathway of cell-based therapies in ischemic heart disease and heart failure – time for new recommendations?

Miruna Mihaela Micheu

Abstract

Although substantial advances have been made in treating ischemic heart disease and succeeding heart failure, overall morbidity and mortality from these conditions remain high. Stem cell-based therapy has emerged as a promising approach for prompting cardiac rejuvenation. Various cell types have been tested in clinical arena, proving consistent safety results. As for efficiency outcomes, contradictory findings have been
