## Community acquired methicillin-resistant Staphylococcus ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2831021>

CA-MRSA commonly causes **skin and soft tissue infections**. In the current case report, we describe **community acquired pneumonia** due to MRSA which is until now infrequently seen. Further, this patient's **clinical course was complicated by rhabdomyolysis** which is even more uncommon.

Feb 14, 2010 · Community-acquired methicillin resistant Staphylococcus aureus (CA-MRSA) is considered an underreported entity in India. In this case report, the authors describe a thirty-five year old immunocompetent male presenting with severe respiratory distress requiring intubation. On further work up, a CT thorax showed features consistent with necrotizing **pneumonia**.

## Community-acquired pneumonia complicated by rhabdomyolysis: A clinical analysis of 11 cases

Bo Zhao, Rui Zheng

### Abstract

#### **BACKGROUND**

It has been found in clinics that community-acquired pneumonia (CAP) can be complicated with rhabdomyolysis (RM), and that RM symptoms are subtle and easy to miss. Most local and international studies have been published as case reports. Due to the relatively low incidence of RM caused by CAP, we need more systematic researches to understand the characteristics of RM caused by CAP to improve its diagnosis and treatment.

#### **AIM**

To investigate the clinical characteristics of patients with community-acquired

## A documented case of Legionella infection presenting with ...

<https://www.itjem.org/2019/02/12/a-documented-case-of-legionella-infection-presenting...> ▾

Legionella infection is recognized as a frequent cause of both community-acquired pneumonia and nosocomial pneumonia, accounting for between 2 and 15% of pneumonias requiring hospitalization. A rare but demonstrated complication of Legionella infection is rhabdomyolysis.

The composite image includes the following elements:

- Flowchart:** A decision tree for diagnosing rhabdomyolysis. It starts with 'PRESENTATION: Sudden onset of bleeding symptoms (eg, hemoptages into the skin, muscles, or soft tissues and mucous membranes)'. It branches into 'History of hemostatic dysfunction' (leading to 'Consider congenital hemophilia or alternate diagnosis, include workup') and 'No history of hemostatic dysfunction' (leading to 'Consider acquired hemophilia, include workup').
- Chemical Structure:** A complex organic molecule, likely a beta-lactam antibiotic, with a piperazine ring, a sulfonamide group, and a benzothiazine core.
- Anatomical Diagram:** A diagram of the human respiratory system showing the bronchi, cardiac notch, diaphragmatic surface of the lungs, and costal surface of the lungs. A circular inset shows a magnified view of the bronchus and blood vessels.
- Table:** A table with multiple columns and rows, likely a clinical data table or a list of references, though the text is too small to read.
