Dear authors, My recommendations are below, Abstract: Please add a last sentence to background section about what you will present in the text. Introduction: You should give more data about neoadjuvant therapy and also phase II study of palbociclib in breast cancer. In addition, please discuss the potential benefits of palbo over chemo in neoadjuvant setting (toxicity etc..) The English structure of the manuscript should be re-checked. Please present the case in one paragraph, you don't have to split it into sections. How could you decide to give only tamoxifen, did you perform genetic analysis? Please add it to manuscript. During follow-up how did you notice the supraclavicular LAP? During physical examination? Because MRI is not a routine imaging and if it is in your institution, discuss it in text. After surgery, did you consult radiation oncology? It is a locoregional relapse and she didn't get radiation before. Discussion: Please add the references of ongoing studies from clinicaltrials.gov.
