One size does not fit all for pancreatic cancers: A review on rare histologies and therapeutic approaches

Monica Niger, Michele Prisciandaro, Maria Antista, Melissa Anna Teresa Monica, Laura Cattaneo, Natalie Prinzi, Sara Manglaviti, Federico Nichetti, Marta Brambilla, Martina Torchio, Francesca Corti, Sara Pusceddu, Jorgelina Coppa, Vincenzo Mazzaferro, Filippo de Braud, Maria Di Bartolomeo

Abstract

Exocrine pancreatic neoplasms represent up to 95% of pancreatic cancers (PC) and are widely recognized amongst the most lethal solid cancers, with a very poor 5-year survival

[Understanding and targeting cancer stem cells: therapeutic ...](https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3674516)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3674516>

In 1963, Bruce et al observed that only 1%–4% of **lymphoma cells** (not all cancer cells) can form colonies in vitro or initiate **carcinoma** in mouse spleen 2. However, the first compelling evidence proving the existence of **CSCs** is generally acknowledged to have been provided by Bonnet and Dick in 1997 3 .
