SPECIFIC COMMENTS TO AUTHORS

This is an interesting case report and I think it should be considered for publication. However, since there is no test for the 2019-nCoV by the real-time PCR in respiratory or blood samples, my suggestion is the addition of clinical features such as: fever, white blood cell count, lymphocyte count, signs of cardiovascular disease, hypertension, diabetes, details of respiratory conditions such as coughing, weakened breath sounds, dullness in percussion, or diarrhea. As the patient has been on the ICU the team probably has many informations that could be useful for this case report.
