Global analysis of daily new COVID-19 cases reveals many static-phase countries including the US potentially with unstoppable epidemics

Cheng Long , Xin-Miao Fu, Zhi-Fu Fu

Abstract

The COVID-19 epidemics are differentially progressing in different countries. Here, comparative analyses of daily new cases as of 19 April 2020 reveal that 61 most affected countries can be classified into four types: downward (22), upward (20), static-phase (12) and uncertain ones (7). In particular, the 12 static-phase countries
