SPECIFIC COMMENTS TO AUTHORS

Accept comments: In recent years, patients undergoing endoscopic retrograde cholangiopancreatography (ERCP) have increasingly required advanced cannulation techniques. In this manuscript, the author retrospectively analyzed the clinical variables and records of patients who underwent ERCP over the past decade. They found that in the past 5 years, the cannulation complexity of ERCP has increased dramatically, and more elderly patients and patients with malignancies require advanced intubation techniques. This may indicate that more experienced endoscopists need to be trained out to perform these complex operations. I personally support the publication of this manuscript in the World Journal of Gastroenterology.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting summary focusing on escalating complexity of cannulation in tertiary care center ERCPs over the last decade. The text was strictly logical, this phenomenon emphasized the importance of homogeneous training of ERCP endoscopists.
