SPECIFIC COMMENTS TO AUTHORS

The paper summarize efficiently almost all the evidences in COVID19-related liver disease. Even if no original data or hypothesis were brought in this work, there is some useful discussion on the possible pathogenetic pathways, limited to liver. This discussion could be deeper, if the Authors have further data (laboratory or clinical) in their institutions. The references are mainly addressed to chinese studies, that can result in some cultural-biased data (and the Authors highlighted this fact). Some annotations: - The last sentence of page 12 should be refomulated. - There are missing points and commas in the whole article. Spaces should be present after a full stop. - Abbreviations should be used after the complete terms is used for the first time (i.e., hepatocarcinoma (HCC)).

SPECIFIC COMMENTS TO AUTHORS

This manuscript is a narrative review on a very important and timely topic. Although in general I enjoyed reading the paper, I think that the authors should make some more efforts to make it really useful for practicing gastroenterologists. In fact, reading the current version of the manuscript it is difficult to identify what is new and what the added value of this article is. Here are some suggestions: 1) I would omit all unnecessary information especially in the first two pages, where a summary of the SARS-CoV2 infection unrelated to the liver is provided; the manuscript should be more focussed; 2) The illustrations and tables should be more informative: for instance, the table (Figure) on pathophysiological aspects should be more elaborated and include more details (which, in turn, could be omitted or only briefly referenced in the text) to provide a “graphical abstract”; considering a few “graphical summaries” (on pathophysiology; on culprit drugs; on management aspects) would increase the impact of the paper; 3) The aspects related of drug-induced liver damage are covered only in a short section: some of the most important drugs used to treat COVID-19 and with known hepatotoxicity should be discussed in more detail, especially as regards practical measures of patient monitoring; 4) A more detailed algorithm suggesting diagnostic tests to be performed and measures for monitoring liver damage in SARS-CoV2 infection should be made available.
