**LIVER TRANSPLANTATION IN PATIENTS WITH SARS-COV-2: TWO CASE REPORTS**

LIVER TRANSPLANTATION AND SARS-COV-2

**Abstract**

BACKGROUND

Severe acute respiratory syndrome by Coronavirus-2 (SARS-CoV-2) can cause the coronavirus disease 2019 (COVID-19). This disease was declared a worldwide health problem with the characteristics of a pandemic. Most patients have mild symptoms and a good prognosis. Information on the evolution and prognosis of COVID-19 in solid organ recipients is scarce.

## Liver transplant recipients infected with SARS-CoV-2 in ...

<https://pubmed.ncbi.nlm.nih.gov/32667716>

Most data derive from small retrospective series of **patients** transplanted years ago. We aimed to **report** a single-center **case** series of five consecutive **patients** in the early postoperative period of deceased-donor **liver transplantation** who developed nosocomial COVID-19. **Two patients** presented important respiratory discomfort and eventually died.

## Outcomes following SARS-CoV-2 infection in liver ...

<https://www.thelancet.com/journals/langas/article/...>

The proportions of liver transplant recipients who were **hospitalised** with **SARS-CoV-2 infection** (82%) and who died (19%) were similar to those in a previous European case series, which reported that 81% of patients were hospitalised and **16% died**, with some patients in that series still part way through their **disease course**.

## Clinical characteristics and management of a liver ...

<https://pubmed.ncbi.nlm.nih.gov/32565199>

The evolution of **SARS-CoV-2** interstitial pneumonia in this immunosuppressed **patient** was moderate to severe and **liver** injury was not clinically significant. Despite its limitations, this **case report** confirm that the **liver** may be only mildly affected during **SARS-CoV-2** infection, also in **liver** transplanted **patients**.
