#### **SPECIFIC COMMENTS TO AUTHORS**

This Editorial is very nicely written and informative. The facts are well organized and reads well. I only have one small comment. Authors should consider discussing that earlier initiation of the ARI's may result in aggressive molecular subtypes that were not detected in the three recent trials due to time constraints. In other words, could the earlier strong pressure to block the AR result in a more aggressive disease state? Small edit: There is a typo on Section 2.5 : "determining"
