SPECIFIC COMMENTS TO AUTHORS

Considering the increasing incidence and mortality rate due to COVID-19 during this time, I think this paper is welcome and relevant for medical daily practice. I have a few comments though to the authors. Indeed, patients with advanced liver disease present a higher rate of mortality due to liver failure and its complications. I think it is important to mention something about the management of patients with liver cirrhosis who are admitted with esophageal variceal bleeding and are tested positive for COVID-19. The COVID-19 disease management it is different in this category of patients? I will also suggest to check the English consistency of the manuscript. There are several grammatical and ortographical errors throughout the manuscript. Ultimately, please review the abbreviations throughout the manuscript.
