## Patient-Ventilator asynchrony: Surveying the Knowledge of ...

<https://www.sccj-sa.org/article.asp?issn=2543-1854;...>

Saudi Critical Care Journal, Saudi Arabia. Objective: Patient-ventilator asynchrony (PVA) commonly occurs in critically ill patients, and it is connected with poor health outcomes. To prevent PVA, respiratory therapists (RTs) must have sufficient knowledge regarding respiratory physiology and mechanics and have the ability to understand ventilator graphics and patient signs and symptoms.

### Patient-Ventilator asynchrony: Surveying the Knowledge of ...

<https://www.sccj-sa.org/text.asp?2019/3/4/129/273454>

**Saudi Critical Care Journal, Saudi Arabia.** Objective: Patient-ventilator **asynchrony** (PVA) commonly occurs in critically ill patients, and it is connected with poor health outcomes. To prevent PVA, respiratory therapists (RTs) must have sufficient knowledge regarding respiratory physiology and mechanics and have the ability to understand ventilator graphics and patient signs and symptoms.

**Author:** Alawi Adnan Mohammed **Publish Year:** 2019

### (PDF) Patient-Ventilator Asynchrony in Critical Care ...

<https://www.researchgate.net/publication/341061780...>

Among critical care practitioners in **Saudi Arabia**, we found the. ... Patient-ventilator **asynchrony** exists when the phases of breath delivered by the ventilator do not match those of the patient ...

### PATIENT-VENTILATOR ASYNCHRONY IN INTENSIVE CARE ...

[https://journal.chestnet.org/article/S0012-3692\(20\)31031-X/fulltext](https://journal.chestnet.org/article/S0012-3692(20)31031-X/fulltext)

PURPOSE: Ventilator waveforms analysis has been noninvasively and reliably used to detect patient-ventilator **asynchrony** (PVA), but using this tool hasn't been studied in **Saudi Arabia**. METHODS: An observational study was conducted using a validated evaluation tool to assess the ability of critical care professionals (CCPs) to detect different ...

### Ventilator- and interface-related factors influencing ...

<https://www.ncbi.nlm.nih.gov/pubmed/32002040>

(2)Department of Medicine, The University Sleep Disorders Center, College of Medicine, King Saud University, Riyadh, **Saudi Arabia**. Patient-ventilator **asynchrony** (PVA) is common in patients receiving noninvasive ventilation (NIV).

### Patient-Ventilator Asynchrony in Critical Care Settings ...

<https://www.sciencedirect.com/science/article/pii/S014795632030114X>

Sep 01, 2020 · Introduction. Patient-ventilator **asynchrony** (PVA) is a mismatch event between the patient and the mechanical ventilator. PVAs tend to occur during machine-assisted breathing, 1 and it can relate to increased patient ventilator workload. 2 Such dyssynchrony leads to mechanical ventilation (MV) failure, not to mention considerable distress among critically ill patients -distress that can, in ...
