SPECIFIC COMMENTS TO AUTHORS

The authors provide a detailed summary of the epidemiology and treatment methods for various situations of diverticulosis and diverticulitis. It's a great achievement. Much improvement is expected if the authors consider the following points. Major comment 1, As mentioned in the paper, I think that the recurrence of diverticulitis is a big problem, but is there any good way to prevent it? For example, internal medication guidance and dietary guidance. 2, You have pointed out the relationship between diverticulitis and malignant tumors, but is there a relationship between diverticulitis or diverticulitis and the prognosis of life? 3, It is very interesting that the prevalence of women increases as they get older. If you have any idea about the reason, please describe it. Minor comment 1, In abstract, 6th line of result, "Non-operative management of is" Is "of " unnecessary, isn't it?
