

## Response to Reviewer's Comments

Reviewer(s)' Comments to Author:

Heart transplantation is recommended for the treatment of patients with refractory heart failure. Chest pain after heart transplantation is usually considered noncardiac owing to the denervated heart. In the case, author reported one case with chest pain and gastrointestinal symptom. In conclusion section, delete “CNI-induced achalasia should be considered”.

**Response:** Thank you for your comment. We have revised the conclusion section per your comment.
