

It is a well conducted and well written study. It is not novel, nevertheless it does reinforce the known concept of NA use in liver disease. Please add and discuss the following reference: Bengü Tatar , Selma Gül, Şükran Köse, Emel Pala. Long-Term Effects of Treatment with Nucleos(t)ide Analogues on Liver Histopathology in Patients with Chronic Viral Hepatitis B Infection. Turk Patoloji Derg . 2020;1(1):154-158. doi: 10.5146/tjpath.2020.01478. Please try and enhance the discussion with adding more references (if permitted) and data of other studies.

I have added the reference to the discussion part. Thank you very much.
