Laparoscopic liver resection for colorectal liver metastases - short- and long-term outcomes: A systematic review

Emily Taillieu, Celine De Meyere, Frederiek Nuytens, Chris Verslype, Mathieu D'Hondt

Abstract

BACKGROUND

For well-selected patients and procedures, laparoscopic liver resection (LLR) has become the gold standard for the treatment of colorectal liver metastases (CRLM) when

The oncologic **outcomes** after **resection** of **colorectal metastases** are poorly reported. Methods: Between August 1998 and January 2010, 122 patients underwent laparoscopic **resection** for **colorectal liver metastases** during 135 procedures at Rikshospitalet. Patients undergoing surgery between August 1998 and June 2009 were included in research analysis.
