

PEER-REVIEW REPORT

Name of journal: World Journal of Gastrointestinal Surgery

Manuscript NO: 62013

Title: Study on the feasibility and safety of “bridging” pancreaticogastrostomy for pancreatic trauma in Landrace pigs

Reviewer’s code: 05185787

Position: Peer Reviewer

Academic degree: FCPS, MD, PhD

Professional title: Associate Professor, Research Fellow, Research Scientist

Reviewer’s Country/Territory: Australia

Author’s Country/Territory: China

Manuscript submission date: 2021-01-14

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-01-15 04:06

Reviewer performed review: 2021-01-27 08:57

SPECIFIC COMMENTS TO AUTHORS

Damage controlling and secondary damage preventing are problems that deserve attention in surgery for severe pancreatic trauma. The new anastomosis method, “bridging” pancreaticogastrostomy for severe pancreatic injury is very interesting. This surgery has short length of surgery, low secondary trauma, and rapid construction of shunts for pancreatic fluid, it can prevent second surgeries, and achieves a good treatment outcome. In this study, the authors carried out an animal experiment to examine this method. Over all, the design of this study is very well, the experimental methods and procedures are described in detail. The observation indicators are reasonable, and well analyzed. The results are very interesting, and well discussed with updated references. Minor comments: 1. The manuscript required a minor editing. Some minor language polishing should be revised. 2. The title can be changed to: The feasibility and safety of “bridging” pancreaticogastrostomy for pancreatic trauma in Landrace pigs. 3. The figures shows the surgery well. Data in tables are good. However, the tables should be edited. Some unreadable symbols should be deleted.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting animal study for a surgery method of pancreaticogastrostomy. In this study, the Feng et al examined the safety of the “bridging” pancreaticogastrostomy. This surgery methods are very interesting. The manuscript is well written. The surgery procedures of the pigs and the follow up data are well described. The reviewer suggests to accept this manuscript for publication after a minor language editing.
