#### **SPECIFIC COMMENTS TO AUTHORS**

Thank you very much for the opportunity to review this work. This is a review article discussing the impact of nutrition to prevent gestation diabetes mellitus. Well written and comprehensive review article. I have two minor comments that I believe it will strengthen the review: - In regards to the risk factors of GDM, I believe it was discussed more than needed given that the focus of the article is the role of diet in GDM, I would recommend summarizing that part and add a table summarizing the risk factors - I would recommend adding a table to summarize all the literature reviewed including author, study design, sample size, intervention used, results, ..etc Thank you very much!

#### **SPECIFIC COMMENTS TO AUTHORS**

1.Although it was a review article, it was still written in depth and comprehensive. 2.The risk factors causing GDM would be more scientific ,which were weighted and analyzed , and Nomogram was derived.

#### **SPECIFIC COMMENTS TO AUTHORS**

This review provides an overview of potentially interesting lifestyle hygiene modalities that can help prevent GDM during pregnancy, especially for at-risk subjects. Several factors have been discussed in this paper while shedding light on the different risks that result from the proposals to mitigate any possible effects or consequences. The paper is well written with a structured methodology. The statistical analysis is correct and based on recent data and references. Nevertheless, it is desirable that the authors include in the text a summary analysis sheet (table) which results from their objective observations.
