SPECIFIC COMMENTS TO AUTHORS

The use of immunosuppressive drugs and the specific targeting of inflammatory cytokines in autoimmune diseases can lead to the spread of various infections, including viruses. This is why the proper use of immunosuppressive drugs and cytokine-targeted therapies has always been discussed. This study has been reviewed the risk of HBVr in patients with autoimmune diseases undergoing TNF or non-TNF inhibitors to characterize risk of HBVr in patients treated with non-TNF-targeted biologics. Considering that similar studies of this study have been done in the past, the advantages and innovations of this study compared to previous studies should be mentioned.

SPECIFIC COMMENTS TO AUTHORS

Title: I will rather remove from the title "literature review" - it does not add valuable information (if not systematic) and should be avoided. Keywords: should ideally be taken from the MeSH browser. Overall, very, very good manuscript written in a good manner reflecting the evidence-based approach towards patients with AID and hep B. Finally, thanks for the opportunity to review, it was an interesting reading.
