

PEER-REVIEW REPORT

Name of journal: *World Journal of Radiology*

Manuscript NO: 63723

Title: Incidental radiological findings suggestive of COVID-19 in asymptomatic patients

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 05532596

Position: Peer Reviewer

Academic degree: MD

Professional title: Assistant Professor, Consultant Physician-Scientist, Research Scientist

Reviewer's Country/Territory: Mexico

Author's Country/Territory: Egypt

Manuscript submission date: 2021-02-01

Reviewer chosen by: Ze-Mao Gong

Reviewer accepted review: 2021-08-04 23:58

Reviewer performed review: 2021-08-07 19:12

Review time: 2 Days and 19 Hours

SPECIFIC COMMENTS TO AUTHORS

In this review paper, Romeih et al. present a throughout review of the radiological findings suggestive of COVID-19 patients in asymptomatic patients. There review is exhaustive and detailed, and the paper is of great interest. However, a few concerns arise: 1. The authors acknowledge that COVID-19 testing is not perfect. Taking this into consideration, it is confusing how they can assume that all the incidental radiological findings that they list are related to COVID-19 and not to other infection, such as influenza? Did they check the patients for influenza or other viral infections? 2. In oncology patients, they only mention PET-CT scan, but I think that information about findings in the other radiological modalities is missing and should be included. 3. What about the role of PET-CT scan in non-oncological patients? Are there any studies? 4. In their conclusions, they should include what they recommend regarding radiological studies in asymptomatic patients.
