< [Materials and Methods](#) [Results](#) **[Discussion](#)** [Author Contributions](#) >

Abdominal manifestations, including gastrointestinal (GI) **symptoms** and liver enzyme elevation, have been reported frequently in patients with coronavirus disease 2019 (COVID-19) (1,3). However, to our knowledge, corresponding **abdominal imaging** findings have not been published. In our study, 34% of inpatients had GI **symptoms** at admission, which is similar to findings in recent reports (4,5). **Abdominal imaging** was performed in 33% of inpatients with COVID-19, and 17% of patients had cross-sectional im...
