<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3144746>

To date, only a few studies have quantitatively assessed men's **psychological outcomes following BRCA1/2 genetic testing** [14, 22–27]. Prior research includes smaller samples of men (e.g., 30–60 men) who pursued BRCA1/2 testing [14, 24, 27] and evaluated psychosocial and/or behavioral **outcomes** among male carriers and non-carriers.
