SPECIFIC COMMENTS TO AUTHORS

This manuscript overviewed the psychosocial studies for the patients with hematopoietic stem cell transplantation. It is well written comprehensively and well organized as a review. However, I think this manuscript is too descriptive and seems somewhat ambiguous for the reader, especially physicians. I will suggest to add one or two schematic presentation to clarify the psychosocial problems concerning with the hematopoietic stem cell transplantation, which may help to understand the psychosocial and clinical problems with HSCT deeply. My decision is minor revision.
