< Overview Why It's Done Risks How You Prepare What Yo >

An intragastric balloon is a newer kind of weight-loss procedure. A saline-filled silicone balloon is placed in your stomach, which helps you lose weight by limiting how much you can eat. It also makes you feel fuller faster. This procedure is an option if you're overweight or obese, and diet and exercise haven't worked for you. Like other weight-loss procedures, an intragastric balloon requires commitment to a healthier lifestyle. You need to make permanent healthy changes to your diet and get...

**Abstract**

Endoscopically placed intragastric balloons (IGBs) have played a significant role in obesity treatment over the last 30 years, successfully bridging the gap between lifestyle modification/pharmacotherapy and bariatric surgery. Since they provide a continuous sensation of satiety that helps the ingestion of smaller portions of food, facilitating maintenance of a low-calorie diet, they have generally been considered an effective and reversible, less invasive, non-surgical procedure for weight loss. However, some studies
