SPECIFIC COMMENTS TO AUTHORS

This paper is on introduction of new quantitative scores and biomarkers to predict MM prognosis, especially MM imaging. There are some suggestions for the authors as following. Firstly, there are several spell-mistakes in this paper, such as "MM patients are classically describe and defined by the CRAB-criteria..." in the Main Text. It should be changed to "... are classically described... ". Second, the authors should list the specific advantages and disadvantages of computed tomography or magnetic resonance imaging for imaging in multiple myeloma, i.e. a comparison Table preferably.

SPECIFIC COMMENTS TO AUTHORS

1) Abbreviations are not required for plasma cell dyscrasias, focal lesions, International Myeloma Working Group and Area Under the Curve, they are mentioned once in the text ("Focal lesions" appear twice in the text, but the second one does not use an abbreviation). 2) It should be written first in the text without using abbreviations (Positron emission tomography). 3) There is only one study about radiomics application in MM. I think more studies are needed to be mentioned in the article.

Thank you for the corrections and changes. Including figure and table contributes to the comparison of MR and CT in the article.
