Dear Editor,

Please find attached the invited manuscript, **“Primary Pancreatic Lymphoma: A Bi-institutional Comprehensive Cancer Center Review with an Emphasis on Typical and Atypical Imaging Features”** for consideration of publication in the World Journal of Clinical Oncology.

Please note that this is an invited manuscript: Invited Manuscript ID: 02834163

We confirm that this study underwent biostatistics review in the world famous medical institution Mayo Clinic Arizona, United States. Descriptive statistics has been reported. Differences in sizes of tumors showing atypical findings (i.e pancreatic and bile duct dilation, mesenteric root infiltration, and tumor necrosis) and those without these findings were analyzed using the Mann-Whitney test. Frequency of these findings in tumors larger than 10 cm and less than 10 cm was performed with Chi-Square test. MedCalc 19.3 (MedCalc Software Ltd, Ostend, Belgium) was used for statistical analysis.

We thank you for inviting us to contribute to our highly esteemed journal.

Sincerely,

Dhakshinamoorthy Ganeshan
