

Comments: This is an interesting mini-review article. I enjoyed it. However, several concerns arisen before reconsideration of its suitability for publication. 1. It is nice to use some tables which clearly describe postulated benefit and risk of these vitamins intake in patients with CKD. 2. Authors' own speculations at this time regarding this theme should be added. 3. Also some future perspective should be added.

Answering Reviewers:

All the authors are thankful to the reviewers for their expert comments. The manuscript has been edited as per the reviewers suggestions wherever applicable in the revised version.

1. Table 1 and Table 2 were added summarizing the findings of retinols and tocopherols on kidney disease.
2. Future perspectives were added at the end of each chapter
