

Dear Editors,

Thank you for inviting us to submit our manuscript entitled “Pictorial research of pancreas with artificial intelligence and simulacra in the works of Fellini” to the *Artificial Intelligence in Medical Imaging*. We also appreciate the time and effort editors and each of the reviewers have dedicated to providing insightful feedback on ways to strengthen our paper. Thus, it is with great pleasure that we resubmit our article for further consideration. We also hope that our responses we provide below satisfactorily address all the issues and concerns editors and the reviewers have noted.

To facilitate the review of our document, the following is the answering to the comments by reviewers.

Dear Reviewers,

We really thank you for your reviewing. Below is the answering of your reviews.

First, we shall answer the review from the Reviewer 05382551.

You have stated that ‘the article is incomplete. It must be developed and written.’ Great thanks for your providing these insights. We agree that, as the research article, the document is not completely written and our research ought to be developed more and more. This is a valid assessment, however the type of the document is not an ‘article’ but a ‘letter to the Editor,’ then our primary concern should not be with the completeness of the research, but with providing a fresh perspective that comes from reading the original article. Therefore, we believe that the document is not that problematic as a letter, and that it is acceptable to publish it as such without any changes. We think, naturally, when the research is complete, it should be submitted as an ‘article’ with the addition of the new results, and your review has made us more determined to do so. We strongly thank for it.

Second, we shall answer the review from the Reviewer 05832146.

You have stated that ‘the author provides a interesting view of medical image and artificial intelligence territory, although philosophical discourse has not been much applied to those research. With the development of the medical image and artificial intelligence, such research will will become more and more important and needed in the territory.’ Great thanks for your providing these insights. We are strongly encouraged by your review, which gives us some sort of proof that our research is meaningful enough. Our research is only at the beginning, but we believe that future work will have a positive impact on this field. We strongly thank for your reviewing.

That is all. Thank you for reviewing our manuscript with your valuable comments.

Sincerely,

The Author

Again, thank you for giving us the opportunity to strengthen our manuscript. We hope that this persuade you to accept our submission.

Sincerely,

Hiroki Tahara
