

Biostatistics Statement

02 May 2022

Dear Editor-in-Chief

Title:

Quality of life after surgical and endoscopic management of severe acute pancreatitis: a systematic review

Chief Investigator:

Emmanouil Psaltis

This letter is to confirm that we have not performed statistical analysis in this study as it is a narrative/qualitative review. The nature of the included studies in this systematic review was such that a meta-analysis was not appropriate.

Yours sincerely

Emmanouil Psaltis MBBS, MRCS, PhD

Speciality Registrar in General Surgery
