SPECIFIC COMMENTS TO AUTHORS

This is a cross-sectional study about the relations between elevated Glypican-1 positive exosomes and pancreatic cancer precursor lesions. Simplifying words of the title is suggested. Was GPC1+ crExos quantification by flow cytometry performed only once in all patients? Monitor the fluctuations of GPC1+ crExos during the follow-up seems to be meaningful.

SPECIFIC COMMENTS TO AUTHORS

Excellent study that may lead to further studies at other centers of this promising biomarker.
