### **SPECIFIC COMMENTS TO AUTHORS**

The article is within the scope of the journal. The topic is interesting. It is well written and reads smoothly. However, the item cannot be accepted in its current state: a) Given that it is a review, it should be indicated what type of review has been carried out, sources used, search criteria as well as other data that characterize the bibliographic search carried out as well as the analysis work. b) The groups of articles detected should be more clearly outlined. A section should be devoted to each thematic group of articles found. c) It would be necessary to add a discussion section explaining the progress and limitations of the review work carried out. d) It would be necessary to indicate a section of conclusions where the work carried out is synthesized as well as a set of lines of future work.

### **SPECIFIC COMMENTS TO AUTHORS**

1. The title of this article is: Building and evaluating an AI algorithm: A practical guide for practicing oncologists. However, the article does not explicitly mention which AI algorithm was built and evaluated. 2. In the "What is AI: Basic Principles" section, the author provides an overview of AI, It is recommended that the algorithm be more prominent here. 3. In the "Radiomics and Radiogenomics : Shift towards Personalised patient care" section: "Studies have shown that these may be successfully correlated to outcomes such as patient survival and genomic mutations [13]". I suggest listing more literature. 4. In the "Common Applications of AI in Oncology" section: The author discusses the application of AI in Oncology "Classification, Detection, Segmentation and Quantification, Image generation, NLP...", but there is still a lack of evaluation of the advantages and disadvantages of various algorithms. 5. There is no conclusion section in the article. 6. Inappropriate use of punctuation and multiple spaces in the article. 7. The typography of the article leads to difficulties in reading.
