SPECIFIC COMMENTS TO AUTHORS

Authors aimed to determine whether SBTT influences VCE yield and whether any correlation between SBTT and rebleeding after a negative VCE might exist. They detected that there is a time threshold (220 min) for predicting re-bleeding while AUG did not prove the predictive value of the estimation. They also detected a correlation of 220 SBTT with the positive yield of VCE. Thus the results of the study are different than those described in the aim since authors detected a threshold for rebleeding, not for a positive finding..

SPECIFIC COMMENTS TO AUTHORS

The article is within the scope of the journal, and deals with an interesting topic. It is well written and structured. However, some aspects must be improved to be accepted: 1) In the introduction, the state of the art must be extended with a greater number of references and explaining the current situation of the work area. It's too short. 2) The objectives of the work and the analysis methods used should be better explained. 3) The discussion section should be extended and better explained. In this section, the work carried out should be compared with other similar works, establishing the similarities and differences, and the advantages and limitations. 4) The conclusions should describe the scientific contribution of the work in a synthetic way. Likewise, a set of lines of future work should be proposed.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting retrospective study focusing on the effect of small bowel transit time on the accuracy of VCE in evaluation of suspected small bowel bleeding. Unfortunately, there was only one sentence in the issue of correlation between small bowel transit time and the yield of VCE detection of bleeding focus in Part of Result, and the appropriate statistical method should be introduced in the manuscript. Furthermore, the result results of VCE detection of bleeding focus are suggested to be listed.

SPECIFIC COMMENTS TO AUTHORS

Nice paper with high quality statistics. Capsule endoscopy is not a very wide used topic in scientific papers and this kind of correlations are welcome. But, even in regarding this topic 10 titles bibliography is too less for a scientific paper. Also you can add some information regarding the quality in VCE examinations

SPECIFIC COMMENTS TO AUTHORS

Nice revised paper. I suppose is interesting to mention if you use prokinetics for capsule endoscopy.
