

Yale SCHOOL OF MEDICINE

June 20th, 2022

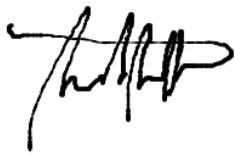

To the editors of the *World Journal of Gastrointestinal Pharmacology and Therapeutics*:

As the first/corresponding author of this manuscript titled "Impact of epinephrine volume on further bleeding due to high-risk peptic ulcer disease in the combination therapy era", I have performed all of the statistical analysis provided.

I have had training in biostatistics as part of my National Institutes of Health/ National Institute of Diabetes and Digestive and Kidney Diseases (NIH/NIDDK) T32 post-doctoral fellowship in clinical investigation and have performed all of the primary statistical analysis for my prior first-author publications in major peer-reviewed journals.

I have knowledge in the statistical tests used for the analyses in this manuscript and have reviewed my work/collaborated with other experts when necessary.

All the best,

A handwritten signature in black ink, appearing to read 'Saad Saffo', with a stylized, flowing script.
