#### **SPECIFIC COMMENTS TO AUTHORS**

1. Through a comprehensive review of phosphate metabolism level and prognosis of patients after liver surgery, this paper presents an influence factor that has not been taken seriously to us from another perspective, which is novel to some extent. 2. I am also engaged in liver surgery, so I may pay more attention to transaminase, bilirubin and serum albumin levels after surgery, because the above factors are closely related to the prognosis of patients. In addition, it is also pointed out that the healing strength of patients with hypophosphatemia is not very strong. In addition, there is no conclusion on the diagnosis and treatment of hypophosphatemia, so whether it is related to the prognosis of patients after hepatectomy is unknown. Therefore, stronger evidence needs to be added. 3. If the author is qualified, it is hoped that further studies can be conducted to demonstrate the relationship between hypophosphatemia and the prognosis of patients after hepatectomy.
