SPECIFIC COMMENTS TO AUTHORS

Dear Authors, you presented an interesting case of a rare peritoneal tumor and a well-written manuscript. There are some points that need to be clarified or modified, according to my opinion. Please pay attention to the following questions and queries: Line 41: and examinations, please correct us such. Line 41 and Line 163: that can be made only histologically, please correct us such. Line 48: please provide the abbreviation EHE also in the introduction. Line 73: abdominal computed tomography (CT) examination, explain the abbreviation CT. Line 75: abdominal magnetic resonance imaging (MRI), please explain the abbreviation MRI. Lines 73-76: obviously there was an hypervascularisation of the mass. Was there any attempt to use contrast media in order to evaluate the vascular enhancement of the mass during the CT and/or MRI imaging? Lines 80-83: histological figures of your findings are highly suggestive at this point. Please provide them if available. Lines 140 and Line 144: the abbreviation EH is probably the abbreviation EHE. Please correct. With Best Regards

SPECIFIC COMMENTS TO AUTHORS

This article reports a case of Primary peritoneal hemangioendothelioma with a good prognosis after surgical treatment. In the discussion part of this paper, the differentiation points of the disease in pathology and histopathology are discussed. It is suggested to supplement the pathological and immunohistochemical pictures of this case, especially myxohyaline Stroma, central area of necrosis, vessels of various dimension, intense chronic inflammation with lympho-monocytoid cells, Plasma -cells, hystiocytes filled with Hemosiderin, etc.
