SPECIFIC COMMENTS TO AUTHORS

In the present paper, the authors introduced "Identification of three mRNA gene signatures with prognostic value in radioresistant esophageal squamous cell carcinomas". Overall, the work is good. There are some points to improve the article. -The figures are not in high resolution. The authors should enhance the quality of the figures. -The 'abstract' should be modified (it is long). -The 'keywords' should be rewritten in better words. -The "material and methods" should be fully explained.
